POSITION	University of Copenhagen Postdoctoral Researcher	<i>2024 – Present</i>
-----------------	--	-----------------------

EDUCATION	Copenhagen Business School PhD in Economics	<i>2020 – 2024</i>
	Paris School of Economics Master in Analysis and Policy in Economics – <i>With Honors</i>	<i>2018 – 2020</i>
	Sciences Po Paris Master in Economics and Public Policy – Cum Laude, <i>Top 10%</i>	<i>2014 – 2017</i>
	Sorbonne Paris 1 Master in Philosophy and Society – <i>With Honors</i>	<i>2014 – 2017</i>

RESEARCH PROJECTS	Stabilization Policies and Permanent Labor Income Inequality (JMP) With Eustache Elina (Banque de France)
--------------------------	---

We study how rising permanent labor-income inequality shapes monetary and fiscal transmission in a Heterogeneous-Agent New-Keynesian model with a non-homothetic taste for wealth. Higher inequality increases the share of hand-to-mouth households, raising aggregate MPCs and lowering the effective intertemporal elasticity of substitution. As a result, the direct effect of monetary policy weakens, while the indirect effect strengthens, leading to a larger output response. A higher share of capital gains generated by monetary policy are paid to wealthy households, making monetary policy more regressive. For fiscal policy, higher MPCs raise impact and cumulative multipliers and make deficit-financed expansions more likely to be self-financing. Finally, the fiscal response to a monetary policy shock becomes more important to determine the output response to a change in interest rate.

Deep Learning Solutions of Large Non-Convex Life-Cycle Models
With Jeppe Druedahl, Jacob Røpke (University of Copenhagen),

We present a deep-learning algorithm for non-convex, finite-horizon dynamic problems with both discrete and continuous controls, designed to handle life-cycle models with large state spaces. The approach approximates policy functions and post-decision value functions with neural networks, separating optimization from expectation. We avoid the use of costly Cartesian grids by using a simulation approach. We demonstrate its performance on three applications: (i) a small job-search model with a discrete labor decision, (ii) a non-convex durable-goods model, and (iii) a large-scale life-cycle model featuring housing, portfolio choice, and a job ladder. An accompanying, easy-to-use software package implements the method.

The Exit Channel of Monetary Policy

With Eustache Elina (Banque de France), Léonard Bocquet (Amsterdam)

Monetary tightening can generate inefficient firms exits, by exacerbating firm illiquidity constraints. Contrary to the common belief that only small firms are affected, new evidence shows that large firms are vulnerable too, leading to large aggregate effects. This paper investigates why monetary tightening causes large firms to exit and explores the macroeconomic implications. In this paper, we study why monetary tightening can lead to large firms exit, and explore its macroeconomic implications. To do so, we develop a model of endogenous firm exit with financial frictions and partial irreversibility. Financial frictions imply that only productive firms are able to take on debt, making them highly exposed to interest rate changes, as partial irreversibility makes deleveraging costly. The quality of firm selection can therefore endogenously worsen during monetary tightening episodes, highlighting a potential need for support for large firms in distress.

From Income to Wealth Inequality: General Equilibrium Matters

With Eustache Elina (Banque de France)

The past 40 years have been characterized by a decrease in the rate of return on safe assets, an increase in the equity premium, an increase in the price of financial assets, and an increase in labor income and wealth inequality. Using a heterogeneous-agent model featuring permanent labor income inequality, a two-asset structure, and non-homothetic preferences, we investigate the impact of an increase in permanent labor income inequality on wealth inequality. As rich households save a higher share of their permanent income than poorer ones, a more skewed permanent labor income distribution increases aggregate savings. With imperfect competition, a higher level of savings leads to a higher valuation of firms and a limited increase in capital stock. The induced capital gains increase wealth inequality due to portfolio heterogeneity.

Why is there still investment in polluting capital? The impact of policy uncertainty on stranded assets

Despite governments' commitments to limit global warming to 1.5°C, there is still investment in carbon-intensive capital. This paper uses a growth model featuring irreversible investment, stranded assets, clean and polluting capital to study this apparent paradox. It shows that current investment in polluting capital and CO₂ emissions are coherent with expectations of a future carbon tax, if investors also expect a bailout of polluting capital. This result implies that governments' credibility can play an important role in reducing the cost of implementing an optimal carbon tax by committing not to bail out. However, there exists a temptation for a short-sighted government to boost output and consumption in the short run by announcing a future bailout.

VISITINGS

IIES, Sweden, invited by Per Krusell

November - December 2022

Sciences Po Paris, France, invited by Xavier Ragot,

September - October 2022

CONFERENCES and PRESENTATIONS

Danish Central Bank,

November 2025

Normac, Copenhagen, Denmark

August 2024

Economix, Paris, France,

April 2024

Macro Seminar, Copenhagen University, Denmark

October 2023

NHH, Bergen, Norway

September 2023

AFSE, Sciences Po, Paris, France

June 2023

	Macroeconomics and mathematics, BI, <i>Oslo, Norway</i>	<i>December 2022</i>
	Inequality and climate change workshop, CBS, <i>Denmark</i>	<i>November 2022</i>
	Workshop in computational economics, CREST, <i>Paris, France</i>	<i>September 2022</i>
	Macro-group at Statistics Norway, <i>Oslo, Norway</i>	<i>April 2022</i>
	Danish Graduate Program in Economics (flash talk), <i>Denmark</i>	<i>November 2021</i>
	Nordic Initiative for Corporate Economics (discussant), <i>Denmark</i>	<i>September 2021</i>
	Danish Graduate Program in Economics (flash talk), <i>Denmark</i>	<i>November 2020</i>
TEACHING	Lecturer, "Advanced Macroeconomics with Heterogeneous Agents", Graduate, University of Copenhagen	2025
	TA, "Macroeconomics", Undergraduate, CBS	2024
	TA, "Macroeconomics", Undergraduate, <i>CBS</i>	2022
	TA, "Microeconomics", Undergraduate, <i>CBS</i>	2021
	Lecturer, "Mathematics for Economists", Graduate, <i>CBS</i>	2021
	TA, "Econometrics for Firm Data Analysis", Graduate, <i>CBS</i>	2020, 2021
	TA, "Macroeconomics", Undergraduate, <i>Paris-Descartes</i>	2020
LANGUAGES	French (native), English (fluent), Spanish (Basic)	
and SOFTWARE	Python, R, Matlab, Dynare, Git/GitHub, L ^A T _E X, Reuters Datastream, Bloomberg	
ACADEMIC SERVICE	Organizer of the internal KU-macro reading group	(2025)
	Creator and organizer of the Macro Lunchs	2023
	Organizer (with Dolores R. Morales) of the DGPE Workshop (100+ participants)	2023
	Main organizer of the Junior Seminar	2022-2023
	Ph.D. representative at the Ph.D. School	2022
PROFESSIONAL EXPERIENCE	OFCE, Paris	<i>September 2019 – July 2020</i>
	<i>Research Assistant</i>	
	CFTC Workers' union, Paris	<i>April – August 2018</i>
	<i>Technical advisor on economic issues</i>	
	HSBC France, Paris	<i>July – December 2017</i>
	<i>Intern Economist</i>	
	Crédit Mutuel-CIC Market Solutions, Paris	<i>December 2016 – July 2017</i>
	<i>Intern Economist</i>	
	Minister of Ecology, Paris	<i>January–July 2015</i>
	<i>Circular Economy Intern</i>
